Shanghai Kinco Automation Co., Ltd. focuses on R&D, production, sales and technical services of automation standard products and intelligent hardware products, which is a leading supplier of machine automation and intelligent solutions for factories in China.

In 1996, Kinco has been providing total automation solutions for global industrial automation equipment manufacturers by relying on standard automation products such as HMI, servo system, stepping system, PLC, low-voltage inverter, etc. to penetrate into the industry, making China's automation solutions prevail all over the world. The company's HMI products have led the wave of HMI popularization in China, and its market share has maintained a leading position among local brand manufacturers for many years.

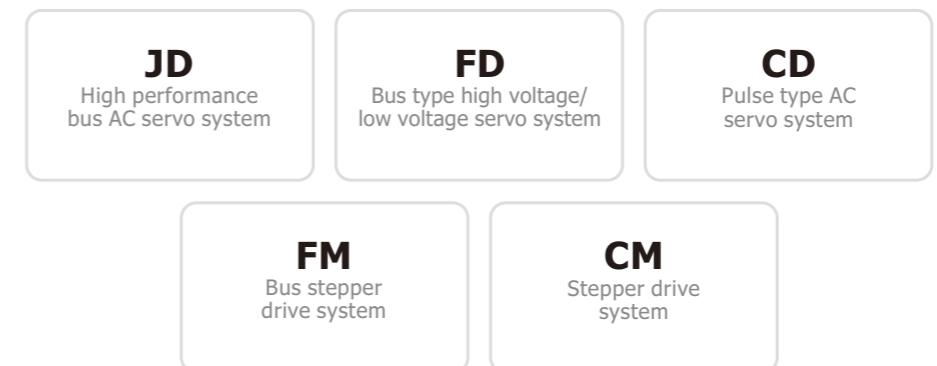

With the mission of "Making China's manufacturing become the top manufacturing in the world", Kinco company insists on investing a large amount of resources in the research and development of automated technology platforms, and sets up R&D facilities in Shanghai, Shenzhen and Changzhou. Kinco company has an automated technology platform that covers all aspects of control, drive, human-machine interaction, communication and electromechanical integration design. In the field of machine automation, Kinco focuses on the industry and has developed special solutions for logistics automation, service robots, medical instruments, professional drones, 3C machine tools, ozone and other industries.

In the field of smart factory, Kinco provides customers with the most easy-to-implement smart factory solutions for manufacturing companies at the field implementation level, PLC control and communication level, Scada and system integration level, and MES management level through its comprehensive automation technology platform and software system developed for smart factory.

With the vision of "creating a better life intelligently" and adhering to the values of "maintain conscience in growth and hold ingenuity in innovation", Kinco is a platform to help employees maximize their creative potential and a partner to help customers succeed in innovative management. We develop products and operate businesses with innovative thinking and practical spirit, adhere to ideals, and expect human creativity to make the world more wonderful.

- Our design concept originated in Germany; support a variety of communication options such as pulse and Modbus/CANopen/EtherCAT/Profinet bus.
- It can drive all kinds of servo motors and stepper motors, including rotary servo motors, cablear motors, direct drive motors, etc.
- It is widely used in the logistics AGV, 3C, medical, new energy, and machine registry industries.
- The product meets international quality and design standards, which is the first choice for international brand servo ODM.

# FD5 high performance AC servo

## New support for Profinet bus communication

### FD5 feature

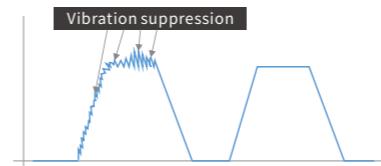

- The power range covers 200W~3KW with compact structure design.
- Significantly improved control performance and response ability to provide customers with more solutions.
- Strong compatibility: 5 generations of products are compatible with 3 generations of product parameters, which can directly update the parameters to replace.

### FD5 series servo drive with five advantages

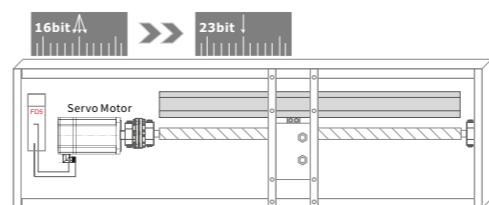

#### Notch filter

For vibration suppression. Up to 4 notch filters can be used simultaneously. The mechanical resonance frequency of the load is automatically measured and the notch frequency is automatically set based on the measurement results.

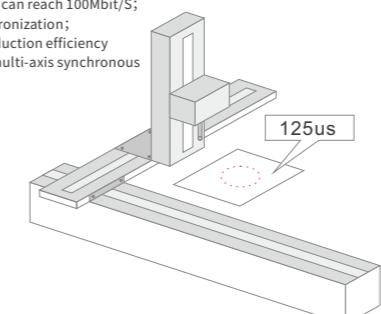

#### Suitable for high-precision encoder

Higher sampling frequency with high precision encoder helps to improve overall servo responsiveness and positioning accuracy.

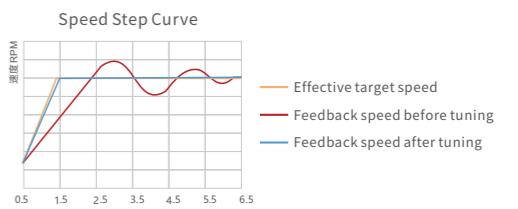

#### Real-time synchronization control

- Supports 125us synchronization cycles;
- EtherCAT communication rate can reach 100Mbit/S;
- Adopt distributed clock synchronization;
- It can effectively improve production efficiency and improve the accuracy of multi-axis synchronous control.

#### Easy tune optimized upgrade and online self-tuning

The self-tuning module calculates the load amount by changing the state of the load under acceleration and deceleration. By adding monitoring signals to the PWM for measurement during motor operation, the load inertia is obtained and then the PID controller is dynamically adjusted according to the set rigidity and application type.

#### S-curve control

S-type curve control opens with one key; no command delay; suitable for long distance positioning control. The speed step of trapezoidal speed curve is large. For mechanical equipment with large inertia or flexible connection equipment, vibration may be caused by sudden change of trapezoidal speed. S-type speed curve is more flexible, smooth acceleration and deceleration, which can effectively overcome the mechanical vibration caused by sudden change of speed.

#### Support for multiple bus communication

Note: When using the internal braking resistor, please short DC+/RB1 to RB2 (internal braking resistance value: FD435 built-in 100Ω/20W; FD625 built-in 300Ω/20W; When the braking power exceeds the tolerable range of the internal braking resistance, the drive will be alarmed for abnormal braking resistor and "0100" will be displayed). When the actual braking power demand exceeds the limit power, please choose the external braking resistor to be connected between DC+/RB1 and RB-, and be sure to disconnect the DC+/RB1 and RB2 short cables. Please refer to the user manual for the selection of external braking resistors.

## SMC60 series servo motor dimensional diagram

# SMC-G2 series high performance servo motor

### New electromagnetic design

Adopting 12-slot and 10-pole design, with small slot torque and low torque pulsation, which is conducive to reducing the vibration during the operation of the motor and making the torque output more smooth.

### New structure and short fuselage

The redesign of the fuselage structure shortens the length of the fuselage, which can save more installation space and reduce the size of the equipment for customers' equipment.

### Insulation class F

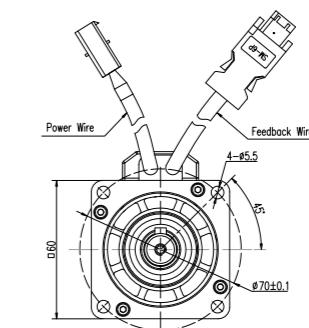

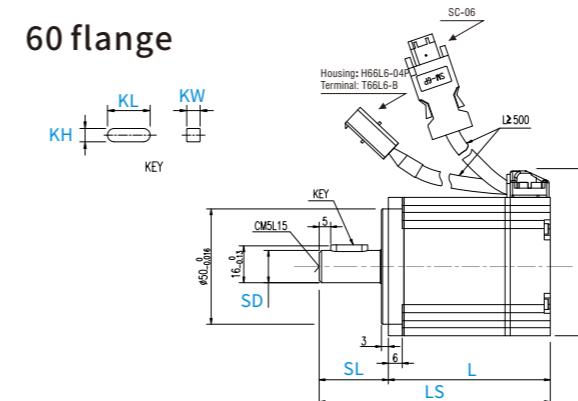

The motor in the industry is at the highest insulation level, which can maintain high reliability and stability in high temperature extreme environment.

### Energy efficiency class: 2
